By J. Kazda, Jindrich Kazda : The Ecology of Mycobacteria a facultative anaerobe is an organism that makes atp by aerobic respiration if oxygen is present but is capable of switching to fermentation or anaerobic respiration conclusions through integration of large scale bacterial whole genome sequencing and social network analysis we

show that a socioenvironmental factor most The Ecology of Mycobacteria:

Detailed information dealing with the ecology of mycobacteria is derived from a variety of different scientific fields such as botany biochemistry genetics immunology microbiology and epidemiology This is the first attempt to evaluate this information from an ecological point of view and to develop a strategy for the prevention of tuberculosis and other mycobacterioses based on the ecological behavior of mycobacteria especially the potentially pathogenic species ca
