From Springer : Structure-Function Relationships of Human Pathogenic Viruses flavivirus is a genus of viruses in the family flaviviridae this genus includes the west nile virus dengue virus tick borne encephalitis virus yellow fever

virus unique animal plant and bacteria characteristics for life all cells have basic needs cells have diverged in their structure and function to accommodate these Structure-Function Relationships of Human Pathogenic Viruses:

0 of 0 review helpful Review from Microbiology Today Vol 30 May 2003 By A Customer this book contains a series of reviews each of which uses a well characterized virus to illustrate the fundamental processes involved in viral life cycles the volume brings together several interesting topics under one cover Structure Function Relationships of Human Pathogenic Viruses provides information on the mechanisms by which viruses enter the cell replicate package their DNA into capsids and mature into new virions The relation between structural features and the pathogenicity and oncogenicity of some of the most relevant human viral pathogens are demonstrated and the acquisition of defense mechanisms through virus host interactions are presented In contrast to
