From Springer : Mycobacterial Skin Infections oct 13 2016nbsp;nontuberculous mycobacteria ntm are environmental organisms that are normally found in soil and water they have only recently been associated with disease atypical mycobacterial infection authoritative facts about the skin from dermnet new zealand Mycobacterial Skin Infections:

This well illustrated book is a comprehensive guide to the cutaneous clinical presentations of mycobacterial infections. The Mycobacterium genus includes over 170 species nontuberculous mycobacteria (NTM) having been added to the obligate human pathogens such as M tuberculosis and M leprae. NTM are widely distributed in the environment with high isolation rates worldwide the skin is a major target with variable clinical manifestations. A cure
